QEO1 – Manuscripts in the QED3 construction

LPM1 / LPO1
Lattice laws and finite estimates
Gaussian, trace and chessboard bounds; infinite-lattice curvature laws with all nine RP families.
Draft: 53 pages
Difficulty: 5/5

MBM1 / MBO1
Maxwell block estimates
Constrained means, local bounds and the exact Gaussian split, including the stated weakening and domain estimates.
Draft: 15 pages
Difficulty: 3/5

FBM1 / FBO1
Chamber fermion estimates
Free kernels, weighted local integration and determinant gains. Reconstructed connections use Maxwell bounds.
Draft: 27 pages
Difficulty: 4/5

RNM1 / RNO1
Extraction and contraction
Relevant extraction, bounded reconstruction and normalized contraction, with their distinct estimates.
Draft: 27 pages
Difficulty: 4/5

all three

NLM1 / NLO1
Exact density and nonlinear step
Construct the local density, bound its nonlinear remainder, and close one renormalization step.
Draft: 33 pages
Difficulty: 5/5

free kernels

PRM1 / PRO1
Positive probe and free response
Positive quartic coefficient and free coefficient comparisons for the translated-product argument.
Draft: 18 pages
Difficulty: 4/5

select the same bare sequence

both

CEM1 / CEO1
Continuum existence and inheritance
Gaussian and correlation stability, compactness, structural inheritance and prescribed-parent weak recovery.
Draft: 15 pages
Difficulty: 2/5

CVM1 / CVO1
Covers and common tuning
Odd-cover agreement and one bare pair per cutoff, transported to the specified reference tori.
Draft: 32 pages
Difficulty: 4/5

RRM1 / RRO1
Source identities and reference response
Early results: T05–T07.
Construct the sources and prove the zero-flux/harmonic and Wick identities. T06 is an input to the terminal measure.

finite Gaussian, trace and chessboard bounds

ECM1 / ECO1
Ergodic components and clustering
Inherited reflection forms and Gaussian bounds, with clustering on the same full-measure component set.
Draft: 8 pages
Difficulty: 3/5

T06: zero flux

TPM1 / TPO1
Terminal measure and pressure
T08–T09: iterated photon operators, sectors and the exact bounded-Borel measure identity.
T10–T11: two-sided partitions and the matter-partition defect between the two reference tori.
Current manuscript: 24 pages
Difficulty: 4/5

T07: Wick identity

Later result: Q4R, T12–T15.
Using the terminal measure, control the normalized mixed response through degree four in each cell variable, including the complex complement and remainder.
Draft: 35 pages
Difficulty: 5/5

T09: terminal measure

free coefficients and positive probe

Parent and component hypotheses for the closed-field covariance proof in QEM1

T11: pressure

parent recovery and components

Q4R: response

all inputs

VTM1 / VTO1
Volume transfer and component cumulants
All-volume translated-product bounds, the finite-periodic moment passage for each prescribed volume-first parent, and positive component fourth cumulants under the component Gaussian bound.
Draft: 18 pages
Difficulty: 4/5

structural inputs and conditional component cumulants

joint application and parameter checks

QEM1 / QEO1 – Final QED3 construction
Shared cutoff conventions, common parameter admission (T16), the closed-field rotation proof, supported-tensor OS application (M18), and final assembly on one common full-measure component set. The transfer and component-cumulant estimates are imported from VTM1.
Target: subsequential field-strength limits whose almost-every ergodic component satisfies the full tensor OS axioms and has a strictly positive fourth cumulant.
Current manuscript: 32 pages
Difficulty: 5/5

Green: draft written. Difficulty: 1 (routine) to 5 (most demanding). Total: 337 manuscript pages.
Joined inputs are required together; crossings without a dot do not join.
